Mohammad Noor AbuKhlaif

Building & Leading AI-Powered Developer Platforms | SDE III at
Expedia Group (ex-Amazon) | Tech & AI Advocate
Jordan

Summary

I build AI-powered tools that help engineers move faster. Currently at Expedia Group, I invented and lead EG Wizard - a platform that turned weeks-long framework migrations into hours, starting as a GitHub Copilot Extension and evolving into a full AI-native platform with autonomous agents, MCP servers, and Skills integration. It became our team's 3-year strategic roadmap, endorsed by senior leadership. Beyond building, I lead - shaping platform strategy, driving technical direction, and stepping into product thinking when the team needs it. I've navigated multiple org-wide restructures, owned critical systems serving millions of daily requests as the sole engineer with zero incidents, and consistently operated beyond my level. I mentor and develop engineers, and I care deeply about building teams that outlast any single person. Before Expedia, I was at Amazon, where I designed and built scalable, highly available services from the ground up - working across distributed teams spanning the US, Europe, India, and the Middle East. That experience shaped how I think about systems, ownership, and operating at scale. I'm passionate about sharing knowledge and advocating for AI adoption. Named Expedia Group's first GitHub Copilot Champion in 2024 and AI Champion in 2026, I've trained hundreds of engineers on AI-powered development across the organization. Outside work, I teach programming through my YouTube channel and online courses - because the best way to master something is to teach it. I work daily across Java, Kotlin, Python, JavaScript, and TypeScript - building with tools like Spring Boot, GraphQL, gRPC, AWS, and increasingly, AI-native architectures (MCP, agent frameworks, LLM tooling). Always open to conversations about AI in developer tooling, platform engineering, or just good engineering culture. - YouTube: <https://www.youtube.com/c/CodeWithNoor>- GitHub: <https://github.com/mohnoor94>- Website: <https://www.noor.sh>- Email: moh.noor94@gmail.com

Experience

Expedia Group

4 years 7 months

Software Development Engineer III - Edge & API Platform - Gateway Foundations

July 2025 - Present (1 year)

Amman, Jordan

I architect and build the AI-powered infrastructure and core platforms that help engineers at Expedia Group ship faster, safer, and more autonomously.

I invented and engineered EG Wizard - an AI-powered migration platform that went from a 3-day proof of concept to the team's official 3-year strategic roadmap, endorsed by Senior Directors and recognized by our SVP. It started as a GitHub Copilot Extension, evolved into an autonomous agent, and matured into a full AI platform with MCP servers, Skills, and multi-tool integration - one of the earliest real-production AI use cases solving genuine pain points across the company.

Strategic Execution & Impact:

- AI Product Builder: Shipped EG Wizard v1 through v4 in 6 months, reducing migrations from weeks to hours. Built a chain-of-tools agent architecture that reduces AI hallucination. Delivered v4 with Skills + MCP support in 3 intensive days.

- Strategic Driver: Co-shaped the team's 3-year platform vision with senior leadership. Stepped into the product engineering gap - driving technical direction and what the team tackles next. Leading initiatives across multiple service frameworks and participating in a company-wide infrastructure modernization program.

- AI Knowledge Leader: Named Expedia Group's first GitHub Copilot Champion. Trained hundreds of engineers across the org. Go-to reference for AI strategy in my team, org, and office.

- Crisis Leader: Sole owner of a critical SDK portfolio (millions of daily requests) when the team dissolved. Zero production incidents. Built the

transition strategy and recommended killing my own project when the business case changed - saving 50+ SDE weeks.

- People Developer: Onboarded 6 engineers onto a 150+ repository framework ecosystem. Building the next generation of platform engineers through coaching and progressive ownership.

Core belief: The best platform engineering is invisible. Teams should build products, not fight frameworks.

Software Development Engineer III - Partner Developer Experience
July 2022 - June 2025 (3 years)

Amman, Jordan

Owned and evolved the SDK platform powering Expedia Group's partner integrations - including RAPID SDK (millions of daily requests), serving as the backbone for partner-facing APIs across multiple business lines.

- SDK Platform Transformation: Architected and led the shift from a centralized SDK bottleneck to a self-service model, enabling domain teams across multiple business lines to generate and maintain their own SDKs - accelerating partner integrations across the business.

- Production Impact: Diagnosed and hotfixed a critical production incident in under 15 minutes, preventing \$2.87M in gross booking losses across multi-item checkout.

- AI & Developer Productivity Pioneer: Named Expedia Group's first "Hero Highlight" GitHub Copilot Champion and 2024 MVP in Engineering Productivity. Led organization-wide training sessions driving measurable productivity gains.

- Resilience Under Org Change: When the team dissolved during a major reorg, became the sole owner of the entire SDK portfolio. Maintained zero production incidents, built the transition strategy for incoming leadership with zero context, and orchestrated a clean handoff - all while keeping partner teams aligned and unblocked.

- Mentorship & Cross-Team Influence: Mentored junior engineers to independent ownership. Recognized by Principal Engineers for "standards-raising code reviews" and being "a trusted point of contact across teams."

Software Development Engineer III - InsurTech

December 2021 - July 2022 (8 months)

Amman, Jordan

Built next-generation insurance products for Expedia Group's travelers, working across the full stack with Kotlin, Java, GraphQL, Spring Boot, gRPC, and AWS.

Beyond delivery, took on engineering leadership early - mentoring multiple engineers, participating in hiring, and improving the team's tooling and engineering standards.

Code with Noor

Tech & Programming Trainer

February 2013 - Present (13 years 5 months)

Amman, Jordan

- I have a YouTube channel (Code with Noor) in which I teach programming with Python, C++, and some other languages. (<https://www.youtube.com/c/CodeWithNoor>).

- I teach online & offline courses on Python, Java, C++, and more.

Amazon

Software Development Engineer

September 2019 - December 2021 (2 years 4 months)

Amman, Jordan

- Designed and built scalable and highly available services from scratch using Java, React, and various AWS Services.

- Improved and integrated services and features across multiple Amazon marketplaces for millions of users.

- Coached and led other software engineers and trainees in different projects and initiatives.

Wiley

2 years 8 months

Software Engineer - Mid Level

September 2018 - September 2019 (1 year 1 month)

Amman, Jordan

- Designed and developed the mid-tier and front-end layers of Atypon Insights, a web-based project, using Java and Jakarta EE, Maven, JavaScript, jQuery, and other technologies.
- Led the creation of a stand-alone automation framework to facilitate the migration from a legacy to a new system using Java, Selenium (Grid), AWS Services, Gradle, Python, and Bash.

Software Engineer

June 2017 - August 2018 (1 year 3 months)

Amman, Jordan

- Designed and developed the mid-tier and front-end layers of Atypon Insights, a web-based project, using Java and Jakarta EE, Maven, JavaScript, jQuery, and other technologies.
- Led the creation of a stand-alone automation framework to facilitate the migration from a legacy to a new system using Java, Selenium (Grid), AWS Services, Gradle, Python, and Bash.

Software Engineer Intern

February 2017 - June 2017 (5 months)

Amman, Jordan

A 3 month- long projects and tasks based training by Wiley to prepare students to work as Software Engineers which focus on Java SE, Java EE, Servlets, JSP, Git, Design Patterns, Problem Solving, Data Structures, and many other topics.

- Build and design two projects:
 - Multi-Threaded Chat Application · using Java and JavaFX.
 - Student Registration System · using Java, JSPs, Servlets, MySQL, Bootstrap, HTML, CSS, JS, MVC.
- I was hired on Wiley based on my progress and results on this training.

Samsung Electronics

Software Engineer Intern

January 2017 - March 2017 (3 months)

Amman, Jordan

- Built and designed simple Android apps using Java.
- Built and designed a simple backend solution using Java and Spring.
- Solved multiple problems (Problems Solving).
- I passed Samsung Interviews and Problem Solving Exam on the first try.

- I got an offer from Samsung to be hired as a full-time Software Engineer based on my progress and results.

University of Jordan

2 years

Head of the Public Relations Department - Student Union

April 2015 - March 2017 (2 years)

Amman, Jordan

Leading communication strategies and cultivating a positive public image. Served as an Executive Committee member and two-term Executive Director of Public Relations in the Student Union (2015-2017), representing student interests and advocating for their needs.

Student Union Representative (Computer Engineering Department)

April 2015 - March 2017 (2 years)

Amman, Jordan

Elected by peers to represent the Computer Engineering Department in the Student Union. Advocated for student needs, organized events, and facilitated communication between students and faculty.

Education

University of Jordan

Bachelor's Degree, Computer Engineering · (2012 - 2017)

Massachusetts Institute of Technology

ReAct Certificate in Computer and Data Science Program, Computer and Data Science · (2019 - 2020)
